

## Subtitles

Subtitle Edit software

<http://www.nikse.dk/subtitleedit/>

The best one

The screenshot displays the Subtitle Edit 3.3.11 interface. The main window is titled "Subtitle Edit 3.3.11 - C:\Users\X230\Desktop\00063-1-en.xml". The menu bar includes "Fichier", "Edition", "Outils", "Vidéo", "Orthographe", "Synchronisation", "Traduction", "Options", "Réseaux", and "Aide". The toolbar contains various icons for file operations, search, and editing. The main area is divided into three sections:

- Table View:** A table with columns for "#", "Temps initial", "Temps final", "Durée", and "Texte". It contains two subtitle entries:

#	Temps initial	Temps final	Durée	Texte
1	00:00:01,891	00:00:03,234	1,343	Let's go, I'm talking.
2	00:00:07,587	00:00:09,547	1,860	Yeah, it's interesting because...
- Video Preview:** A window showing a video frame with the subtitle "Let's go, I'm talking." overlaid at the bottom.
- Waveform View:** A window showing a waveform of the audio track. The subtitle "Let's go, I'm talking." is highlighted in red, corresponding to the audio peaks. The time range for this subtitle is shown as #1 1,891 -> 3,224.

At the bottom of the interface, there are controls for "Traduire", "Créer", and "Ajuster", along with a "Position vidéo:" field set to 00:00:01,903. The status bar at the bottom right shows "00063-1.mp4 720x406 MP4" and "1/2".
